Benefits of 2017

- Emphasize the organizational requirements and initiative to fully embrace the CDC Core Measures for ASP preparing hospitals
 - to meet the evolving Joint Commission Requirements
 - to meet evolving requirements from CMS which will influence payment.

CAW In year 3 ? 2018

- contingent on a quorum of sufficiently interested centers and states
- Look to focus with even stronger efforts on statewide scale-up and we hope in learning from the early adopters of the NHSN AUR and Resistance measure.
- striving to reach a threshold where there is sufficient NICU data to create appropriate comparison groups, from which risk adjustment models could be developed, in collaboration with the CDC.
